MODERN PINK PAPER · STEP-BY-STEP GUIDE

How to list new designs on Shopify

This guide shows you every click, from a finished card to a live Shopify listing. You do not need to know anything first. Read each step. Do each click. Do not skip any step.

Made from: Erika's screen recording, Oct 15, 2026, 9:00 AM to 2:05 PM, and her activity log after it

Example batch: MA, WTY, WI, SDI, EI, RDI, BRSI (154 designs)

How to use this guide

- **Go in order.** Do Step 1, then Step 2, and so on.
- **Every small step has a number**, like 2.4. Do one small step at a time.
- **The red circle in a picture is where to click.** The red label next to it names what was clicked.
- **Your screen may look a little different.** That is okay. If it looks very different, or you get a message you do not understand, **stop and ask Dalia**.
- **Words in bold** are names you will see on the screen. `Words like this` are things you type or key names. Type them exactly.
- A box that says **NO PICTURE** means the recording did not show that click on screen. The words come from Erika's activity log or from Claude's written steps.

Before you start

Have these ready. You need all of them.

- A Windows computer with **Google Drive for desktop**. Your files show up as the `G:` drive.
- **Chrome**. Be signed in to Dalia's Google account, to **Shopify** (store: modern-pink-paper1), and to **Claude** (claude.ai).
- **Adobe InDesign**. You open the return address files with it.

- The **MPP Shopify Lister**. It is a small panel that shows up on the Shopify Products page. This guide is for version `v1.8.1`.
- Two Google Sheets, saved as tabs in Chrome: **SKU NUMBERS FOR MODERN PINK PAPER2** and **MPP Project Tracker**.
- **Microsoft Teams**, to tell Dalia when you are done.

> **PASSWORDS**
>
> No passwords are written in this guide on purpose. Ask Dalia for any login you do not have.

Words to know

SKU	The code for one design, like `MA043` or `WTY031`. The letters tell you the product line. The number tells you which design.
Line	One group of SKUs that share letters. Examples: MA (moving and new-address cards), WTY (wedding thank-you cards), RDI (rehearsal dinner invitations).
Batch	The group of new SKUs you list together. You name it with the line letters and the date, like `MA WTY WI SDI EI RDI BRSI Oct 15 2026`.
RA	Return address. MA and WTY cards print the buyer's return address. Invitations (WI, SDI, EI, RDI, BRSI) do not.
Font chart	A picture that shows the name font. You only need one when the name is written in a script font.
Zip	One file that holds many files. Zip files have a zipper on the folder icon.
Draft	A Shopify listing that customers cannot see yet.
Active	A Shopify listing that customers can see and buy.
Lister	The helper panel on Shopify that builds draft listings for you.

Know your screen

You will use the **taskbar**. It is the strip along the bottom of the screen. Click an icon there to open or switch to that program. The round **Chrome** icon opens the web. The yellow **File Explorer** folder opens your files. Erika also keeps **InDesign** and **Microsoft Teams** there.

The taskbar. The red circle is on the File Explorer folder icon.

Chrome shows one **tab** for each web page across the top. Click a tab to switch to it. Erika keeps these tabs open all day: **MPP Project Tracker**, **MPP SEO Master Sheet**, and **Modern Pink Paper · Products** (Shopify). If a tab is missing, ask Dalia for the link.

The 8 steps at a glance

1. **Fill in the SKU sheet**
   Write the fonts for each new design.

2. **Make the batch folder and the photo zip**
   Copy the photos into a folder and zip it.

3. **Run the SEO step in Claude**
   Claude writes the titles, descriptions, and tags.

4. **Check Claude's sheet**
   Read every row. Mark it Yes or Fix.

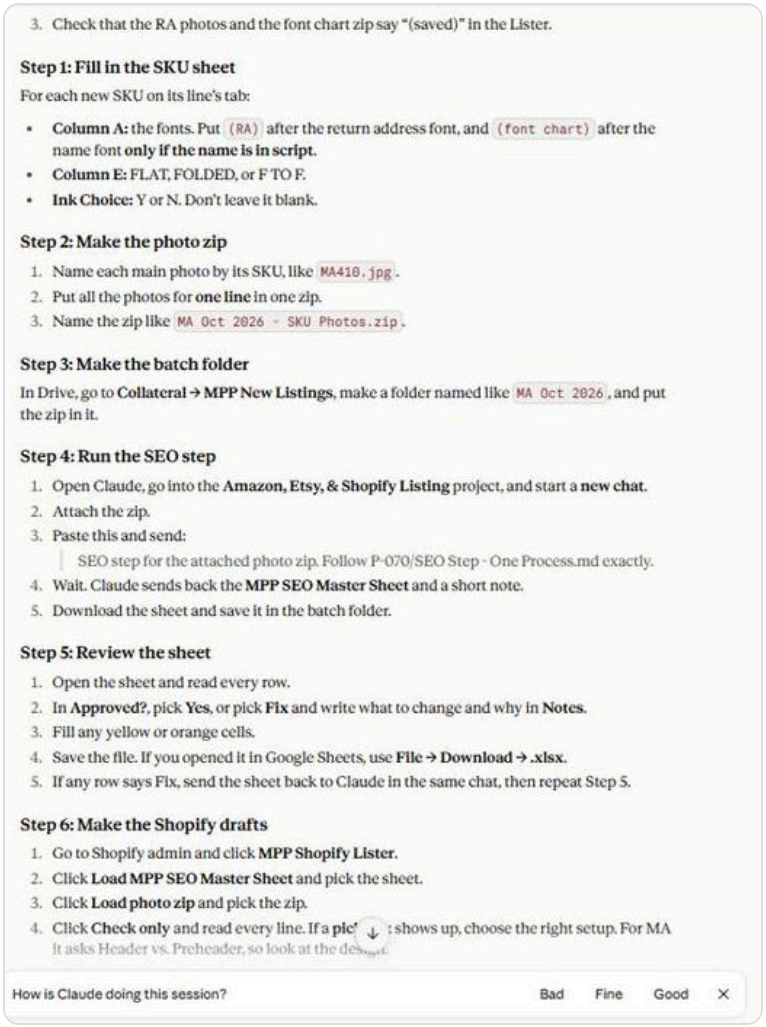

5. **Make the Shopify drafts**
   Use the MPP Shopify Lister.

6. **Check the drafts and make them Active**
   This puts them on the store.

7. **Fix the special options**
   Header words, ink color, and initials.

8. **Write it down and tell Dalia**
   Update the Project Tracker. Send a Teams message.

Claude has its own short list of these steps in the chat called **Design words and product titles**. Here is how it looks.

3. Check that the RA photos and the font chart zip say "(saved)" in the Lister.

Step 1: Fill in the SKU sheet

For each new SKU on its line's tab:

- **Column A:** the fonts. Put `(RA)` after the return address font, and `(font chart)` after the name font **only if the name is in script**.
- **Column E:** FLAT, FOLDED, or F TO F.
- **Ink Choice:** Y or N. Don't leave it blank.

Step 2: Make the photo zip

1. Name each main photo by its SKU, like `MA410.jpg`.
2. Put all the photos for **one line** in one zip.
3. Name the zip like `MA Oct 2026 - SKU Photos.zip`.

Step 3: Make the batch folder

In Drive, go to **Collateral → MPP New Listings**, make a folder named like `MA Oct 2026`, and put the zip in it.

Step 4: Run the SEO step

1. Open Claude, go into the **Amazon, Etsy, & Shopify Listing** project, and start a **new chat**.
2. Attach the zip.
3. Paste this and send:

   > SEO step for the attached photo zip. Follow P-070/SEO Step - One Process.md exactly.

4. Wait. Claude sends back the **MPP SEO Master Sheet** and a short note.
5. Download the sheet and save it in the batch folder.

Step 5: Review the sheet

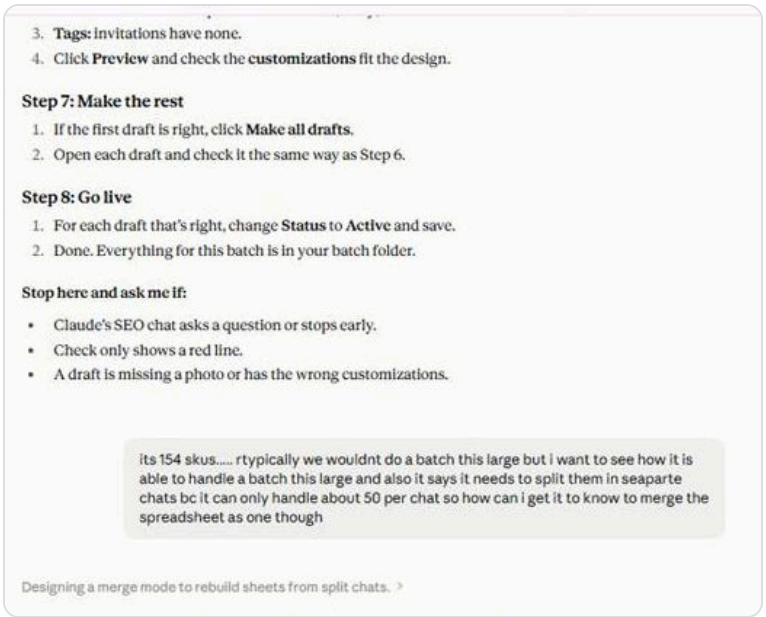

1. Open the sheet and read every row.
2. In **Approved?**, pick **Yes**, or pick **Fix** and write what to change and why in **Notes**.
3. Fill any yellow or orange cells.
4. Save the file. If you opened it in Google Sheets, use **File → Download → .xlsx**.
5. If any row says Fix, send the sheet back to Claude in the same chat, then repeat Step 5.

Step 6: Make the Shopify drafts

1. Go to Shopify admin and click **MPP Shopify Lister**.
2. Click **Load MPP SEO Master Sheet** and pick the sheet.
3. Click **Load photo zip** and pick the zip.
4. Click **Check only** and read every line. If a **pic** shows up, choose the right setup. For MA it asks Header vs. Preheader, so look at the de

How is Claude doing this session? Bad Fine Good ×

Claude's steps 1 to 6.

3. **Tags:** invitations have none.
4. Click **Preview** and check the **customizations** fit the design.

Step 7: Make the rest

1. If the first draft is right, click **Make all drafts**.
2. Open each draft and check it the same way as Step 6.

Step 8: Go live

1. For each draft that's right, change **Status** to **Active** and save.
2. Done. Everything for this batch is in your batch folder.

Stop here and ask me if:

- Claude's SEO chat asks a question or stops early.
- Check only shows a red line.
- A draft is missing a photo or has the wrong customizations.

its 154 skus..... rtypically we wouldnt do a batch this large but i want to see how it is able to handle a batch this large and also it says it needs to split them in seaparte chats bc it can only handle about 50 per chat so how can i get it to know to merge the spreadsheet as one though

Designing a merge mode to rebuild sheets from split chats. >

Claude's steps 7 and 8, and when to stop and ask.

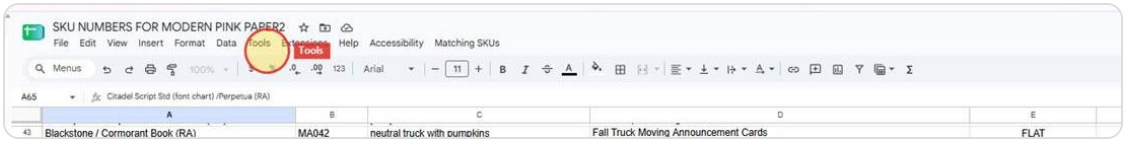

1 Fill in the SKU sheet

You write down the fonts for every new design.

Claude cannot read fonts from a picture well. So you type the fonts in the SKU sheet.
Do this for every new SKU in the batch.

1.1 Click the round **Chrome** icon on the taskbar to open Chrome. (If Chrome is already open, skip this.)

1.2 Click the tab named **SKU NUMBERS FOR MODERN PINK PAPER2**. It is a Google Sheet.

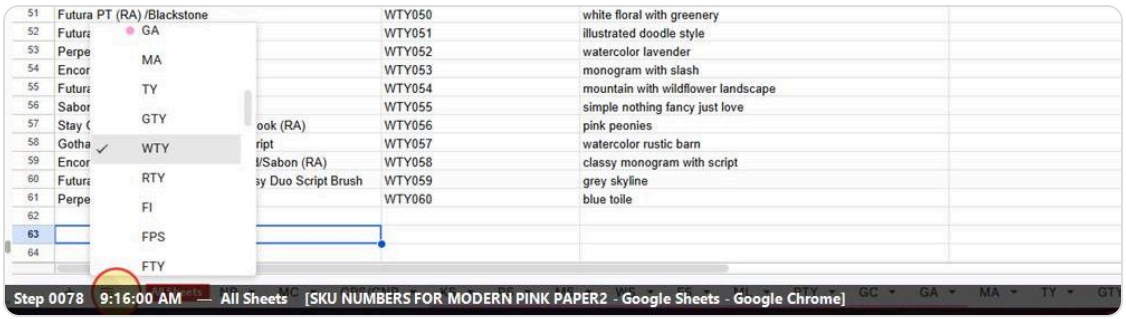

You are in the right sheet when you see this name at the top.

1.3 Look at the bottom of the sheet. There is one tab for each line (MA, WTY, WI, SDI, EI, RDI, BRSI, and more). Click the tab for your line. In the picture, Erika clicked **WTY**.

The line tabs. The red circle is on **WTY**.

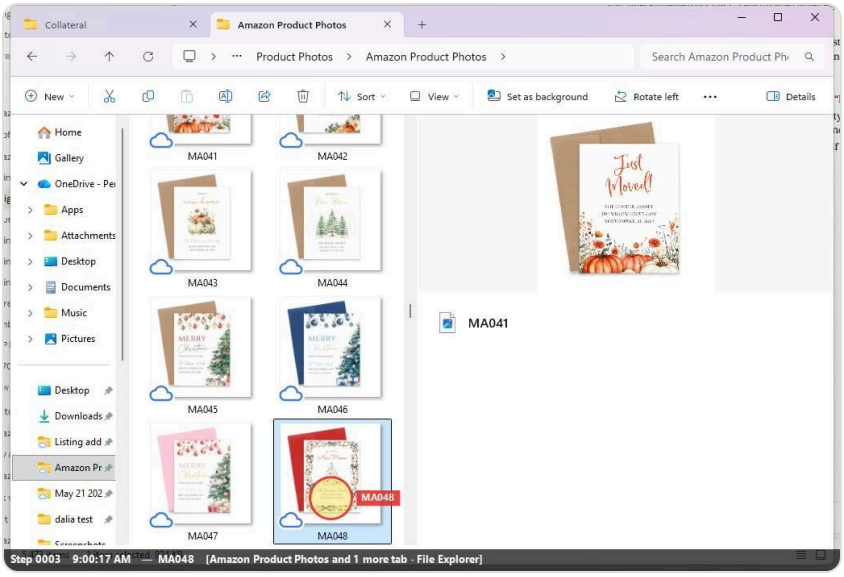

1.4 Cannot see your tab? Click the **All Sheets** button in the bottom left corner. It shows the whole list. Click your line in the list.

The **All Sheets** list.

1.5 Scroll down to the bottom of the list. The new SKUs are at the bottom. Their fonts cell (**Column A**) is empty. Each row has the SKU in **Column B** and design words in **Column C**.

1.6 Look at the design. Click the yellow **File Explorer** folder icon on the taskbar. On the left, click the pinned folder **Amazon Product Photos**. Click the picture with your SKU name. A big picture shows on the right.

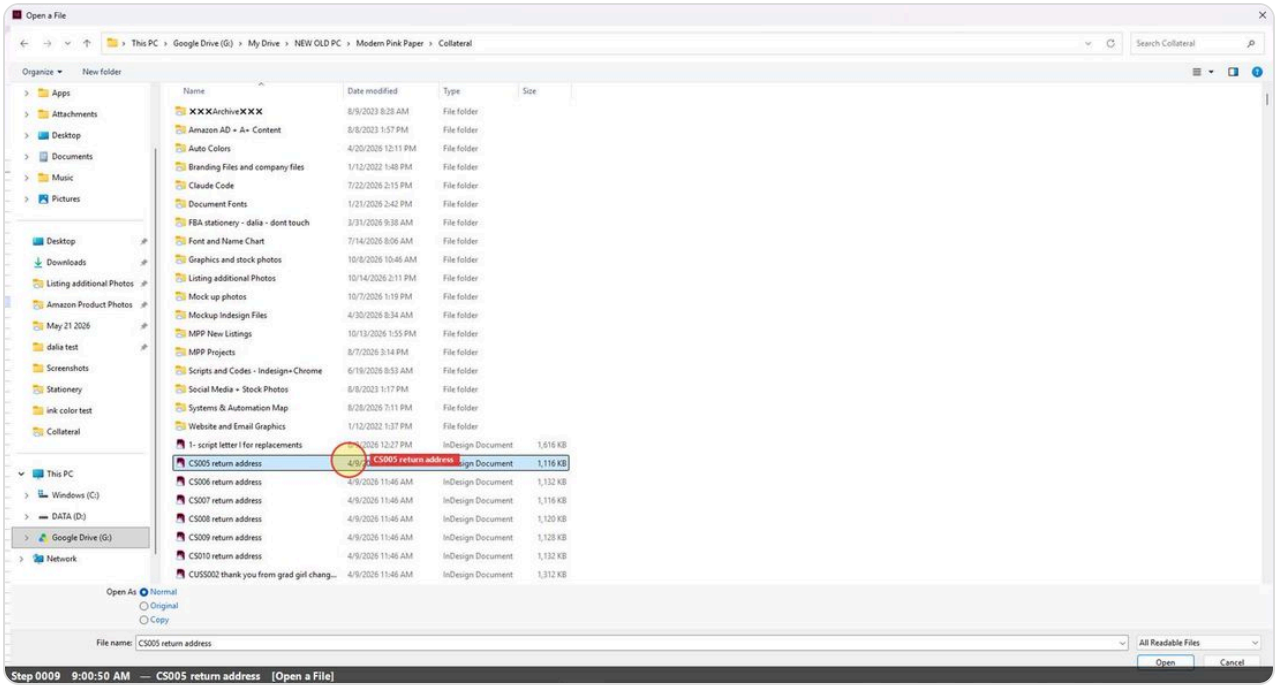

Each photo is named with its SKU. The big preview is on the right.

1.7 **MA and WTY cards only:** open the return address file in InDesign. Click the **InDesign** icon on the taskbar. Wait for it to open. Press `Ctrl + O` (or click **File**, then **Open**).

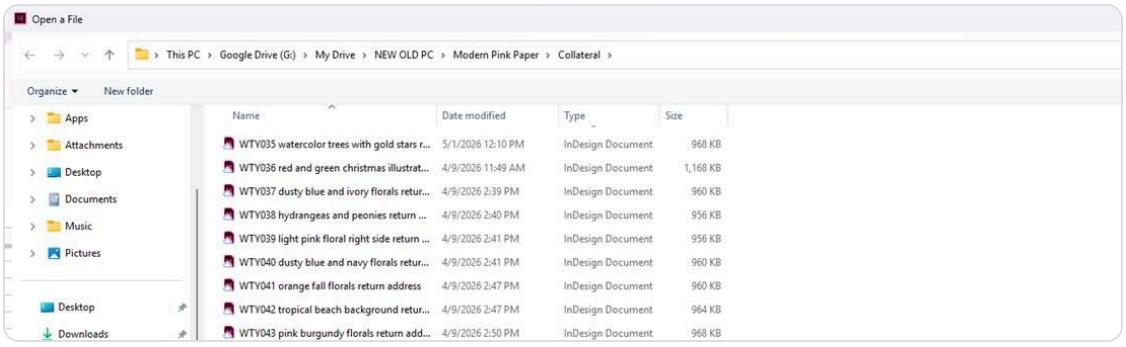

A window called **Open a File** shows. Look at the path at the top. It must say:

`Google Drive (G:) › My Drive › NEW OLD PC › Modern Pink Paper › Collateral`

The **Open a File** window. The files are in the **Collateral** folder.

Find the file whose name starts with your SKU. Click it once. Click **Open** at the bottom right. Example: `MA043 neutral pumpkin with florals return address`.

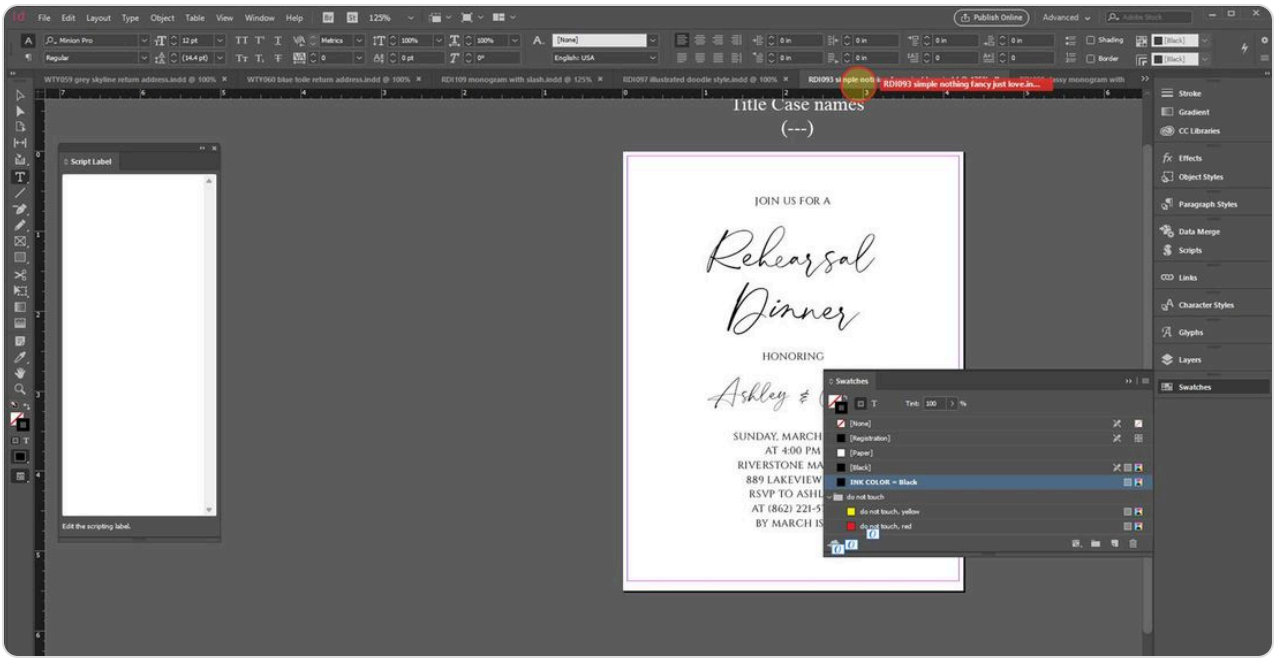

Example: the WTY060 file is selected.

1.8 The card opens in InDesign. The font name shows in the bar at the top left of the InDesign window.

The font box. When you click on text, it shows that text's font.

A card open in InDesign.

TIP **NO PICTURE**

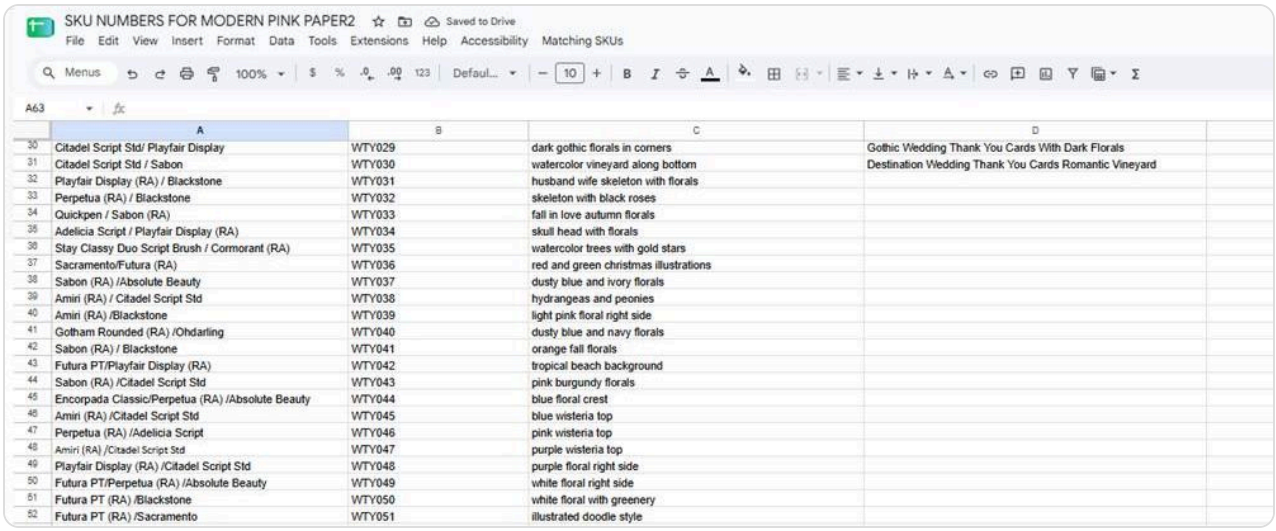

Erika's recording shows her opening the file and then typing the fonts, but it does not show how she read each font. The usual way is to click the text with the Type tool (the **T** in the toolbar on the left) and read the font box. Ask Dalia to confirm.

1.9 Go back to the SKU sheet. Click the **Column A** cell on your SKU's row. Type the fonts. Use this pattern:

- Put `(RA)` right after the **return address** font.
- Put `(font chart)` right after the **name** font. Do this **only if the name is in a script font**.
- Invitations (WI, SDI, EI, RDI, BRSI) have no return address, so they do **not** get `(RA)`.

Example: `Quickpen (font chart) / Cormorant Book (RA)`

Press `Enter` when you are done with the cell.

	A	B	C	D
30	Citadel Script Std/ Playfair Display	WTY029	dark gothic florals in corners	Gothic Wedding Thank You Cards With Dark Florals
31	Citadel Script Std / Sabon	WTY030	watercolor vineyard along bottom	Destination Wedding Thank You Cards Romantic Vineyard
32	Playfair Display (RA) / Blackstone	WTY031	husband wife skeleton with florals	
33	Perpetua (RA) / Blackstone	WTY032	skeleton with black roses	
34	Quickpen / Sabon (RA)	WTY033	fall in love autumn florals	
35	Adelicia Script / Playfair Display (RA)	WTY034	skull head with florals	
36	Stay Classy Duo Script Brush / Cormorant (RA)	WTY035	watercolor trees with gold stars	
37	Sacramento/Futura (RA)	WTY036	red and green christmas illustrations	
38	Sabon (RA) /Absolute Beauty	WTY037	dusty blue and ivory florals	
39	Amiri (RA) / Citadel Script Std	WTY038	hydrangeas and peonies	
40	Amiri (RA) /Blackstone	WTY039	light pink floral right side	
41	Gotham Rounded (RA) /Ohdarling	WTY040	dusty blue and navy florals	
42	Sabon (RA) / Blackstone	WTY041	orange fall florals	
43	Futura PT/Playfair Display (RA)	WTY042	tropical beach background	
44	Sabon (RA) /Citadel Script Std	WTY043	pink burgundy florals	
45	Encorpada Classic/Perpetua (RA) /Absolute Beauty	WTY044	blue floral crest	
46	Amiri (RA) /Citadel Script Std	WTY045	blue wisteria top	
47	Perpetua (RA) /Adelicia Script	WTY046	pink wisteria top	
48	Amiri (RA) /Citadel Script Std	WTY047	purple wisteria top	
49	Playfair Display (RA) /Citadel Script Std	WTY048	purple floral right side	
50	Futura PT/Perpetua (RA) /Absolute Beauty	WTY049	white floral right side	
51	Futura PT (RA) /Blackstone	WTY050	white floral with greenery	
52	Futura PT (RA) /Sacramento	WTY051	illustrated doodle style	

Fonts typed in Column A. Look at the `(RA)` after the return address font.

1.10 In **Column E**, type `FLAT`, `FOLDED`, or `F TO F`. Pick the one that matches the card.

1.11 Find the **Ink Choice** cell for the row. Type `Y` or `N`. **Never leave it blank.**

1.12 Do 1.6 to 1.11 again for every new SKU in the batch. Do every line (MA, WTY, and so on).

Check yourself

- Every new SKU has fonts in Column A.
- Column E and Ink Choice are not blank for any new SKU.

2 Make the batch folder and the photo zip

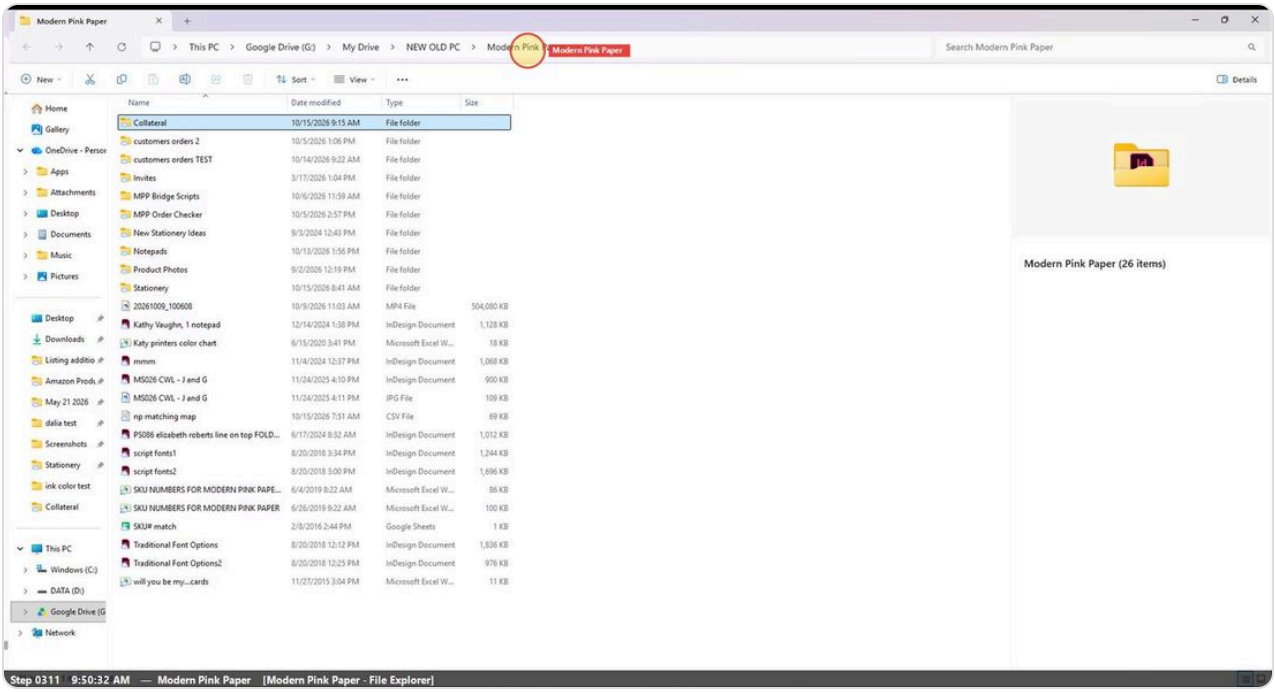

One folder for the batch. One zip with every photo in it.

Claude and the Lister both read the zip. Every photo must be named with its SKU, like `MA041.jpg`. The photos in **Amazon Product Photos** already have this name.

Make the batch folder

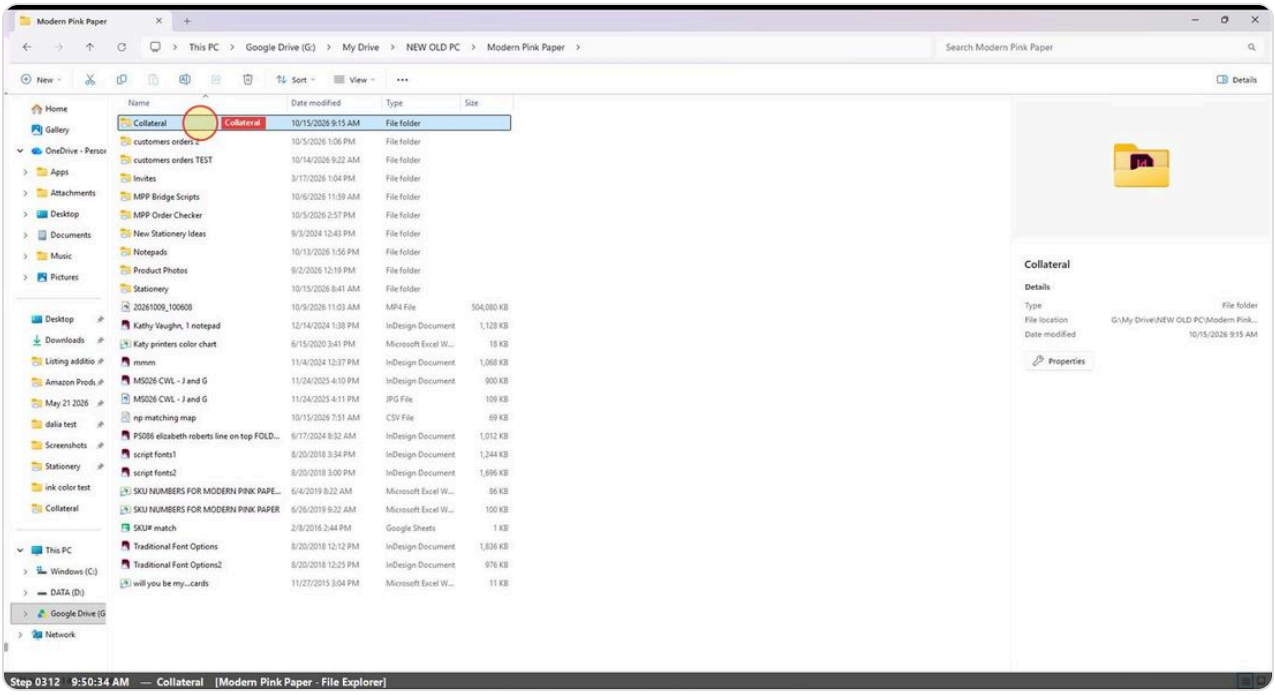

2.1 Click the yellow **File Explorer** folder icon on the taskbar.

2.2 Look at the path at the top of the window. Click **Modern Pink Paper** in that path. (If you cannot find it, the full path is `Google Drive (G:) › My Drive › NEW OLD PC › Modern Pink Paper`.)

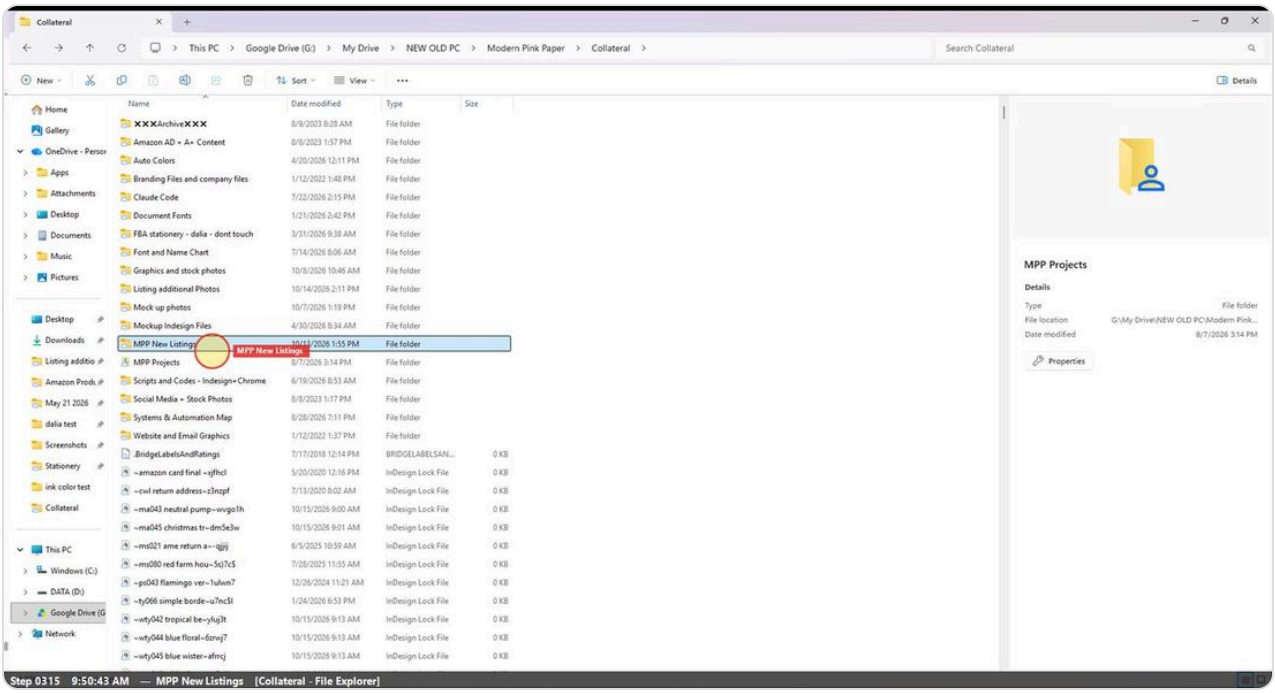

Click **Modern Pink Paper** in the path.

2.3 Double-click the folder **Collateral**.

Double-click **Collateral**.

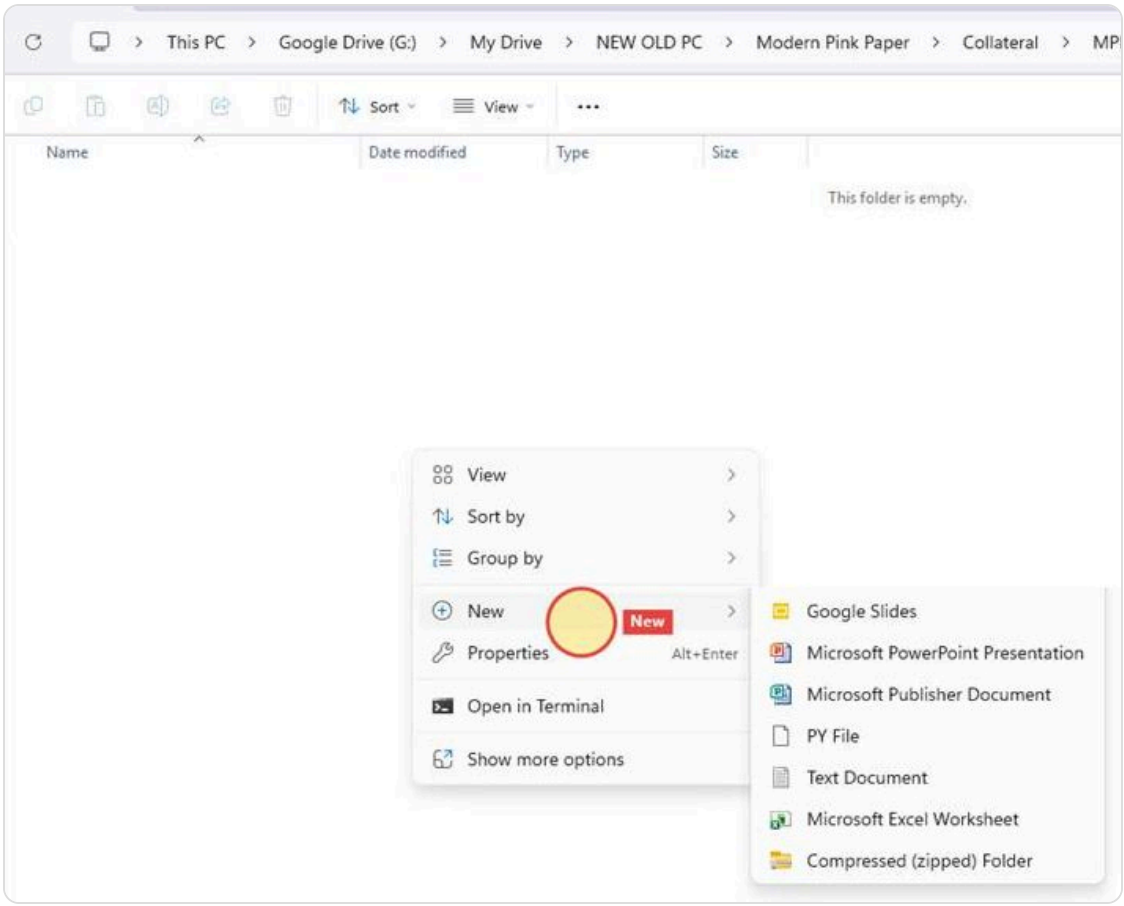

2.4 Double-click the folder **MPP New Listings**.

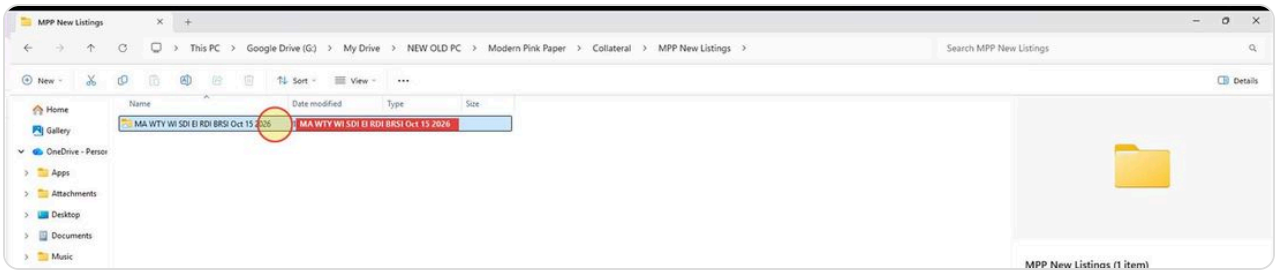

Double-click **MPP New Listings**. (In this picture the click was just before it opened.)

2.5 Right-click on an empty white spot. Click **New**. Click **Folder**. Type the batch name. Press `Enter`.

The batch name is the line letters and the date. Example: `MA WTY WI SDI EI RDI BRSI Oct 15 2026`

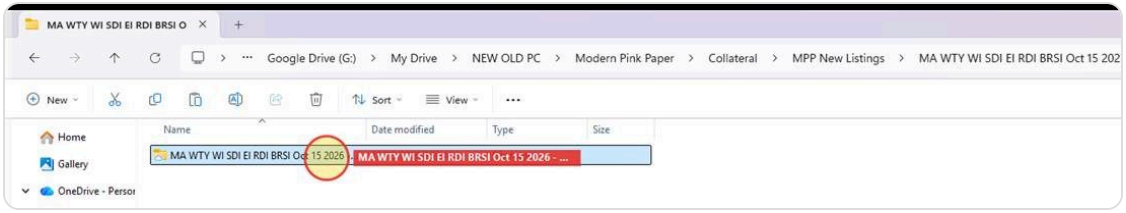

Right-click, then **New**.

The new batch folder.

2.6 Double-click your new batch folder to open it. Right-click an empty spot. Click **New**, then **Folder**. Type the same name and add `- SKU Photos` at the end. Press `Enter`.

Example: `MA WTY WI SDI EI RDI BRSI Oct 15 2026 - SKU Photos`

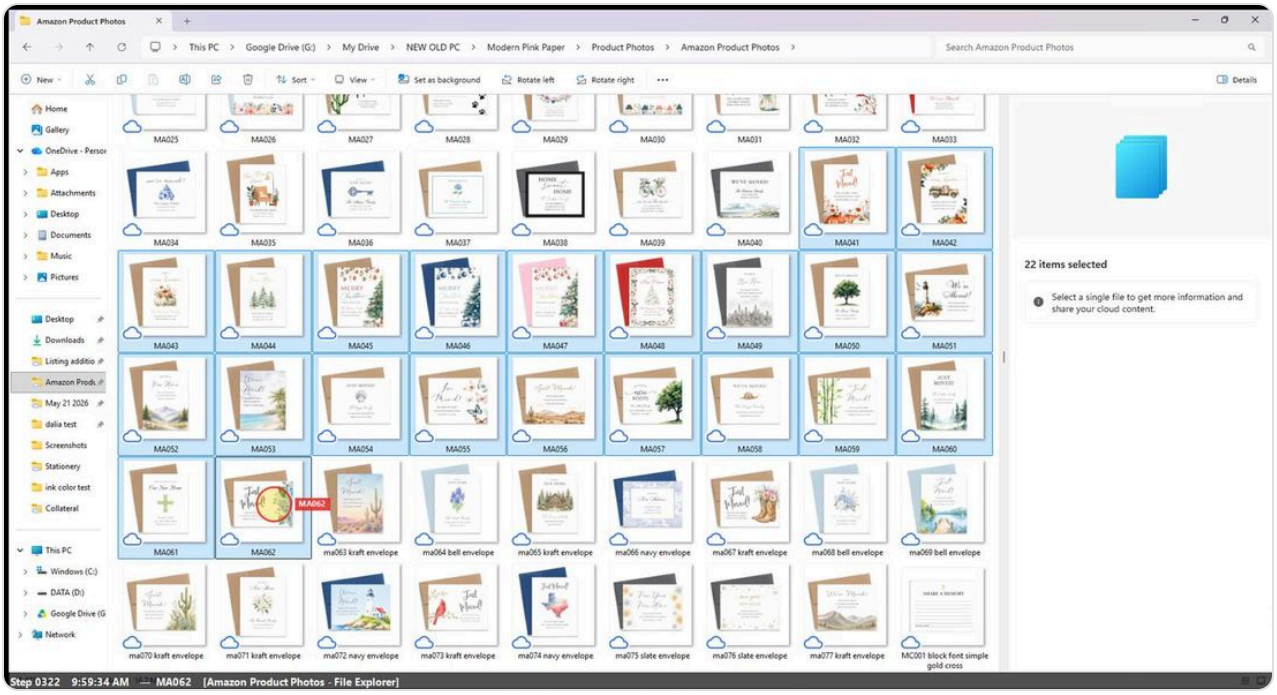

The path shows you are inside the batch folder.

Copy the photos in

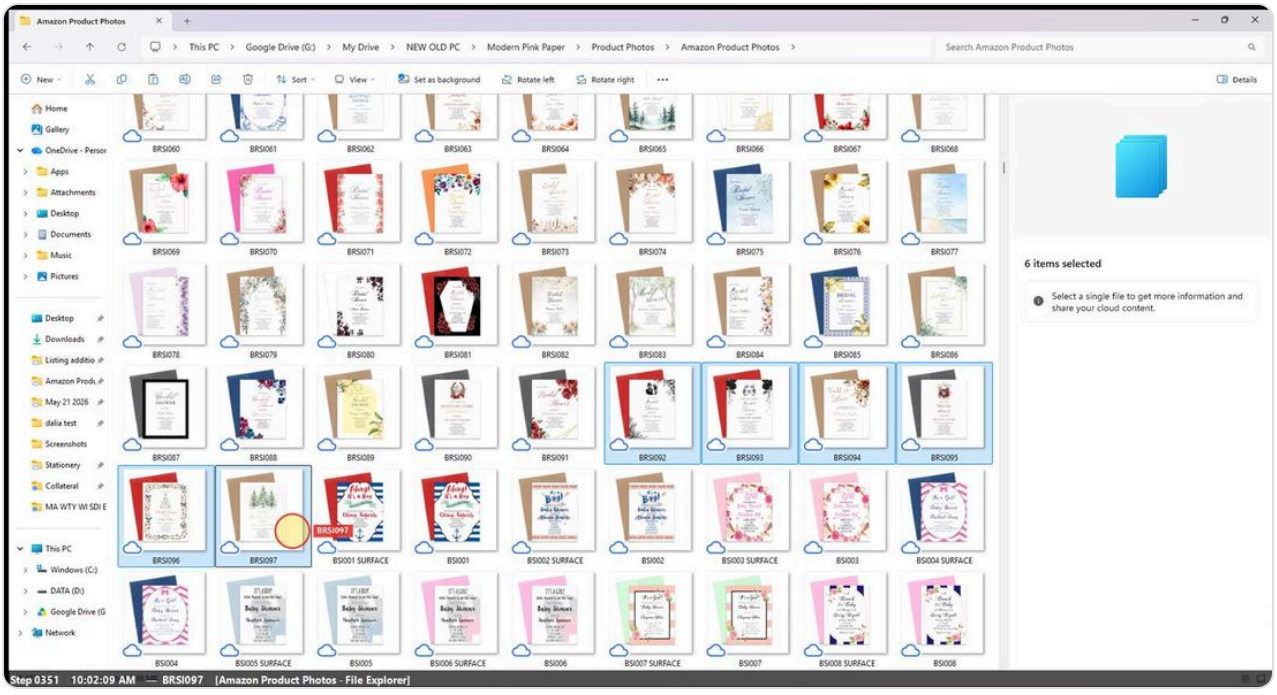

2.7 On the left side of File Explorer, click the pinned folder **Amazon Product Photos**.

2.8 Click the **first** photo of one line. Hold the `Shift` key. Click the **last** photo of that line. Every photo between them turns blue. Let go of `Shift`. Look at the right side. It tells you how many are selected.

MA041 to MA062 are selected. The panel says **22 items selected**.

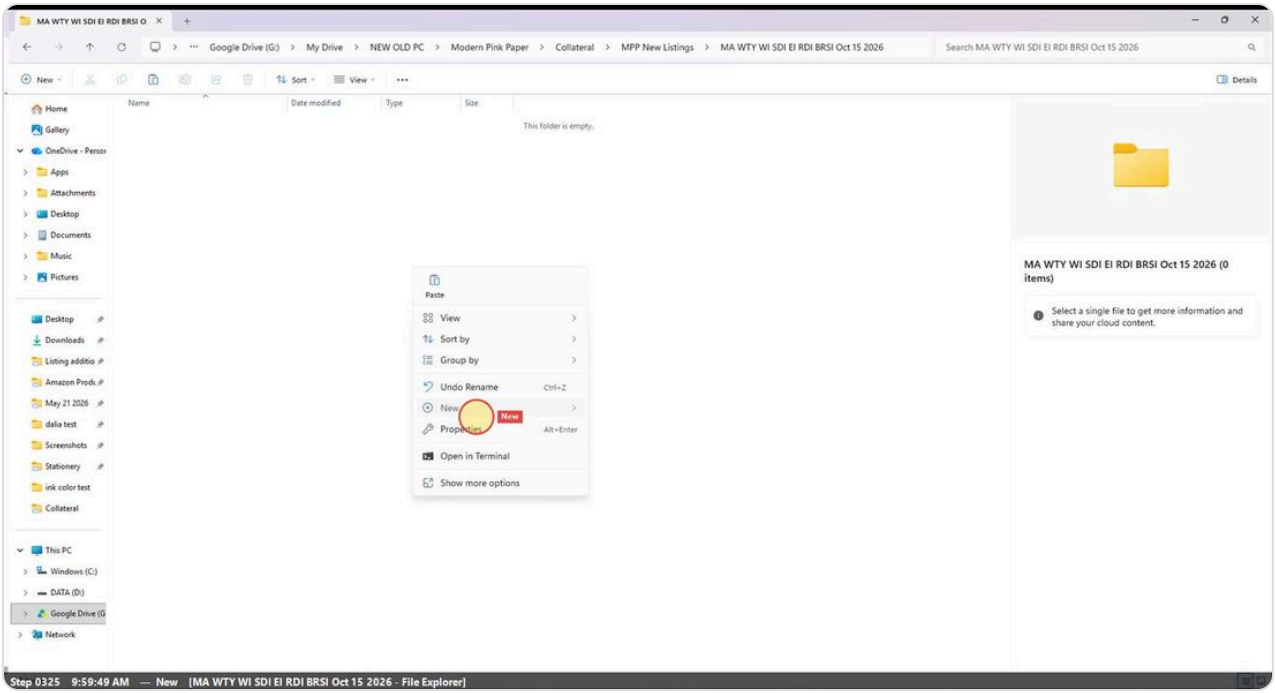

Want a few photos that are not next to each other? Click the first. Hold `Ctrl` and click each other one.

Another line selected: 6 photos.

2.9 Press `Ctrl + C` to copy them.

2.10 Go to your **SKU Photos** folder (it is inside your batch folder in **MPP New Listings**). Open it by double-clicking. Press `Ctrl + V` to paste. (You can also right-click an empty spot and click **Paste**.)

An empty folder. The right-click menu has **Paste** at the top.

2.11 Do 2.7 to 2.10 again for every line in the batch. The folder gets bigger each time.

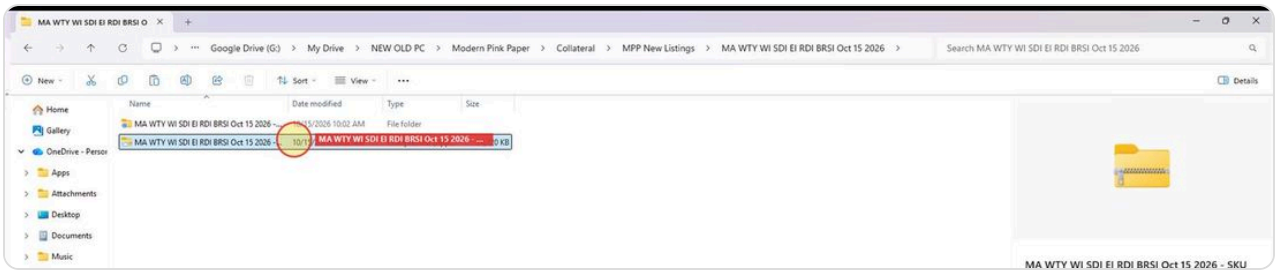

2.12 Check the count. Click an empty spot in the **SKU Photos** folder. The right side shows how many items are inside. The number must match your SKU count.

Zip the folder

2.13 Click the up arrow near the top left (or click the batch folder name in the path) to go up one level. You should see the **SKU Photos** folder.

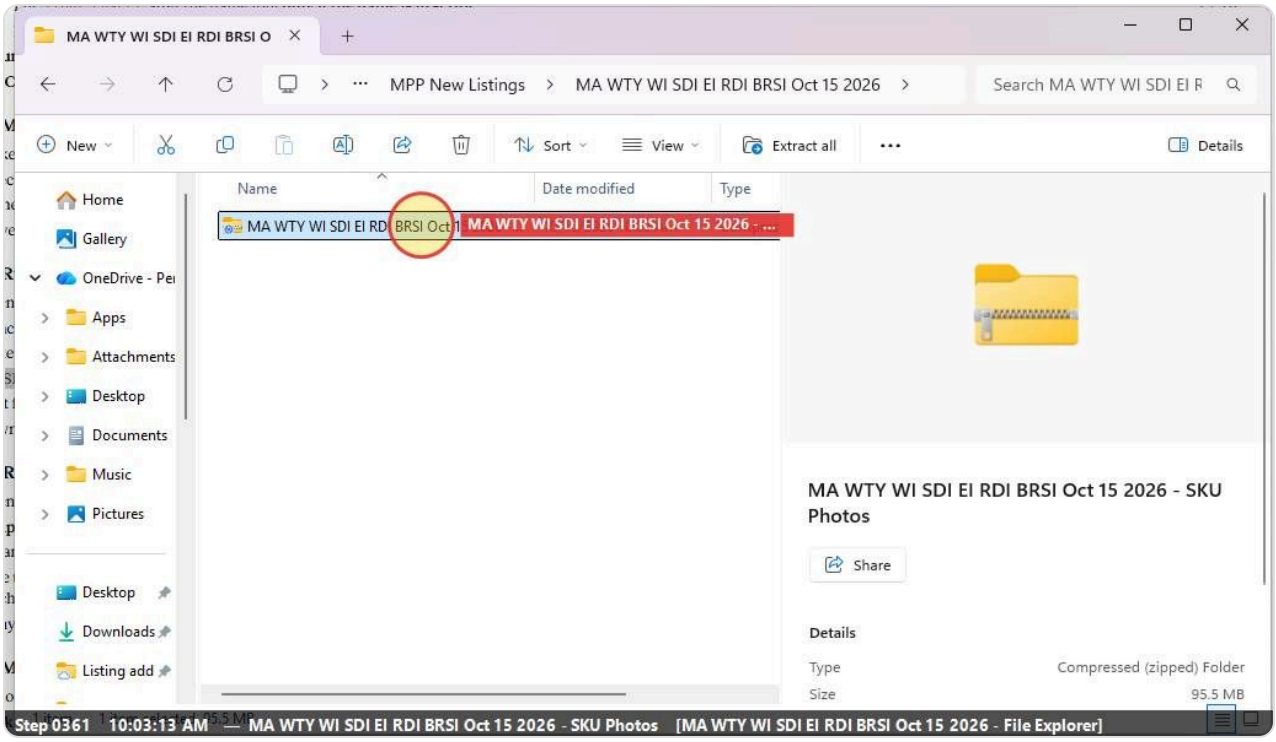

2.14 Right-click the **SKU Photos** folder. Click **Compress to ZIP file**. Windows makes a zip with the same name. Keep that name. It must end in `- SKU Photos`. Claude's instructions call it `... - SKU Photos.zip`.

> **TIP** **NO PICTURE**
>
> The recording shows the folder first, then a zip next to it a moment later. It does not show the right-click. If you do not see **Compress to ZIP file**, click **Show more options**. Ask Dalia if you still cannot find it.

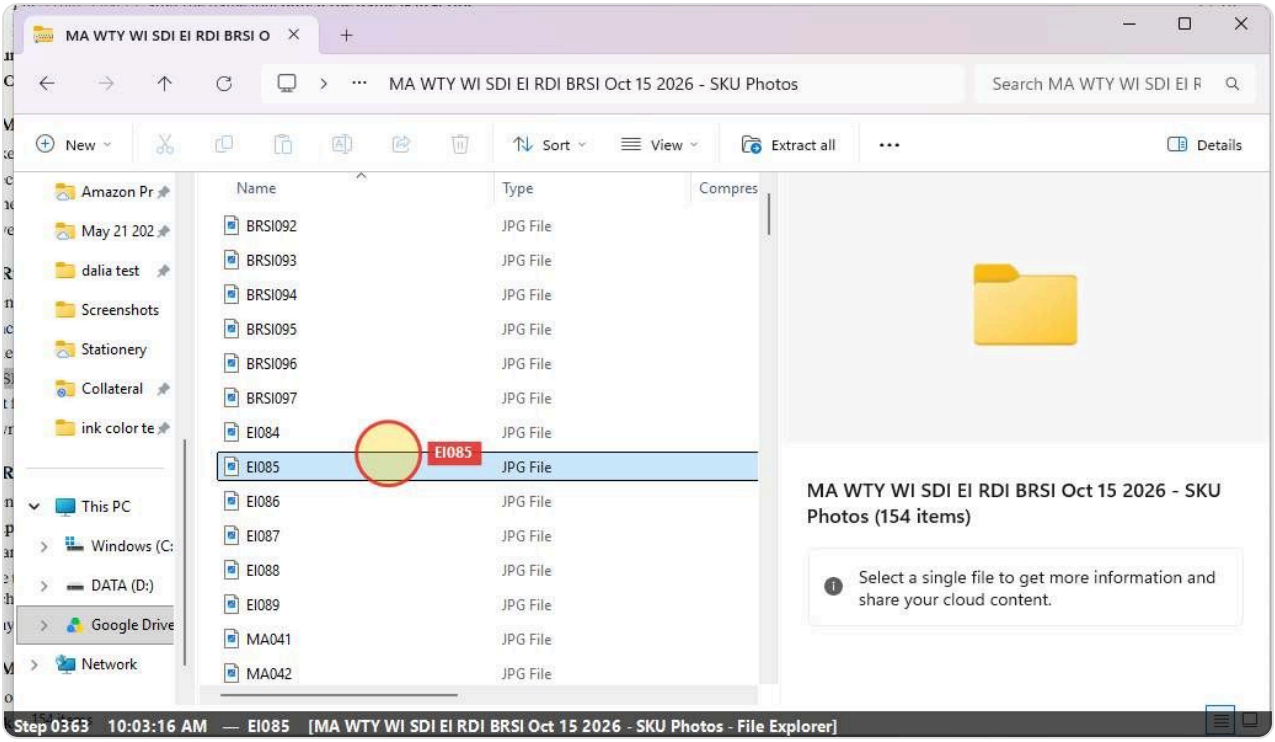

The batch folder holds the folder and the zip.

2.15 Click the zip once. Look at the right side. It says **Compressed (zipped) Folder** and shows a size.

The details panel on the right says **Compressed (zipped) Folder**.

2.16 Double-click the zip. Look inside. Every photo is there. The panel says how many items. Example: **154 items**.

Inside the zip. This batch had **154 items**.

Check yourself

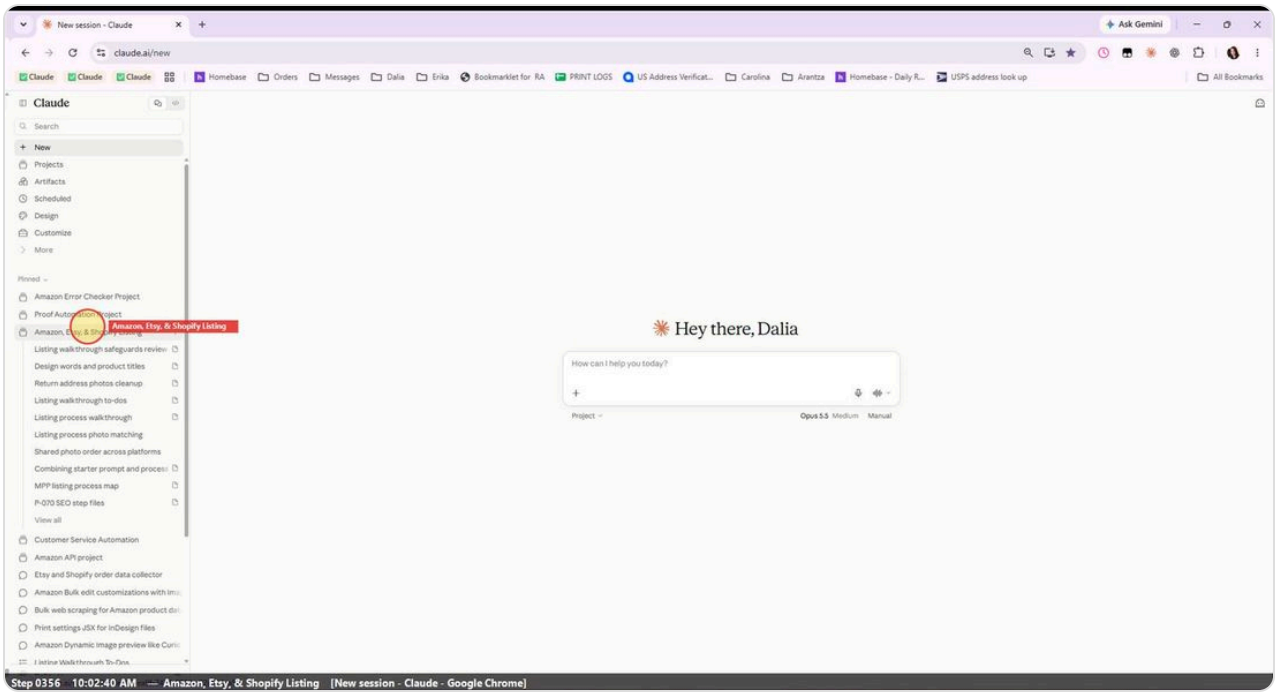

- The zip is in the batch folder.
- The zip holds one photo for every SKU.
- Every photo is named with its SKU.

3 Run the SEO step in Claude

Claude writes the titles, descriptions, tags, and keywords.

3.1 In Chrome, click the **+** at the end of the tabs to open a new tab. Type `claude.ai/new` and press `Enter`.

3.2 On the left side, in the pinned list, click **Amazon, Etsy, & Shopify Listing**. This is a **project**. Claude has the rules saved inside it.

Click the project **Amazon, Etsy, & Shopify Listing**.

3.3 You see the project page and a message box. **Attach your zip** from Step 2. Click the **+** in the message box and pick the zip. Or drag the zip file into the box.

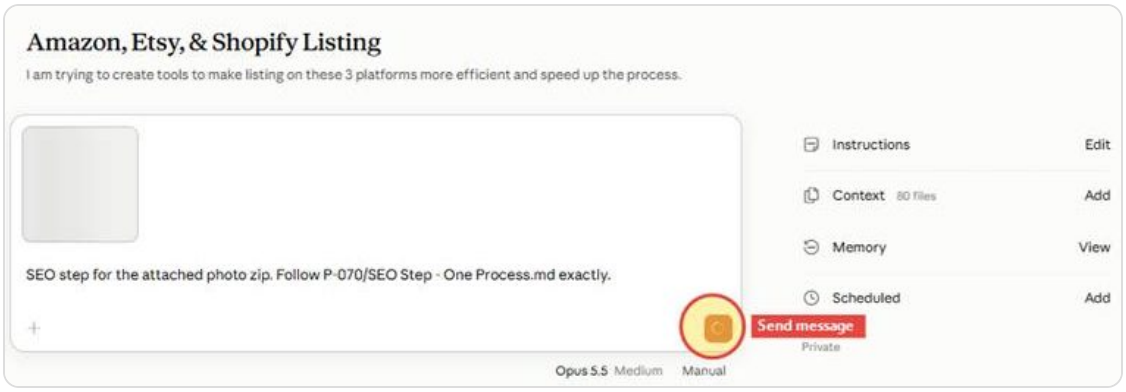

TIP **NO PICTURE**

The recording does not show how Erika attached the zip. The picture below shows the zip already attached.

3.4 Click in the box. Type this sentence exactly:

`SEO step for the attached photo zip. Follow P-070/SEO Step - One Process.md exactly.`

Click the orange **Send message** button.

The zip is attached and the sentence is typed. Now click **Send message**.

3.5 Claude starts a new chat. It says *"Getting set up for this session."* The chat shows up in the left list. Wait.

Claude is getting set up.

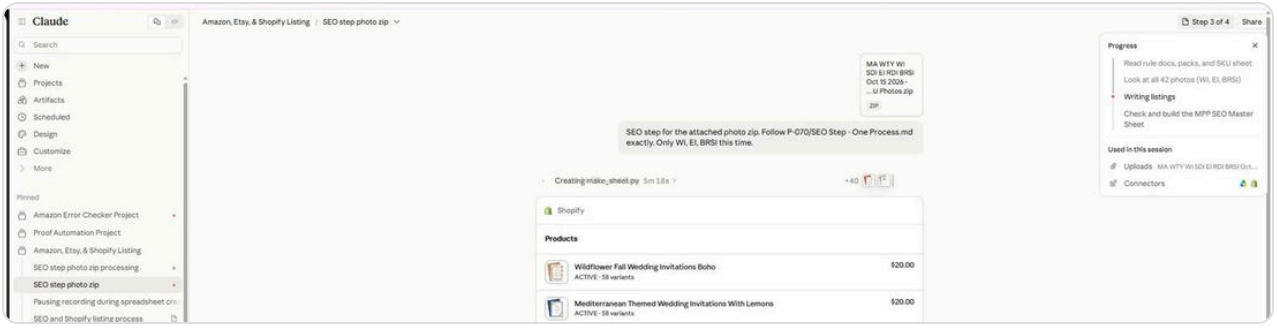

3.6 **Big batch?** Claude may ask how to split it. Pick the choice marked **(Recommended)**. Claude's rule is about **50 SKUs per chat**. In this example, 154 SKUs became 3 chats.

Claude asks how to split 154 SKUs. It suggests 3 chats.

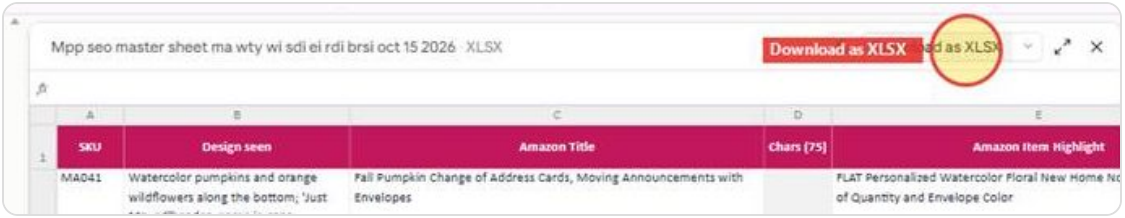

When there are several chats, Claude makes one sheet for each. Then one more quick step joins them into one sheet. Erika asked Claude how to do this, and Claude said she did not need to do anything special. Each extra chat can start with the same sentence plus the lines it should do. Example: `SEO step for the attached photo zip. Follow P-070/SEO Step - One Process.md exactly. Only WI, EI, BRSI this time.`

3.7 Wait. The **Progress** box on the right lists what Claude is doing. It takes **5 minutes or more**. Go do something else, then come back.

Claude is working. The timer is running.

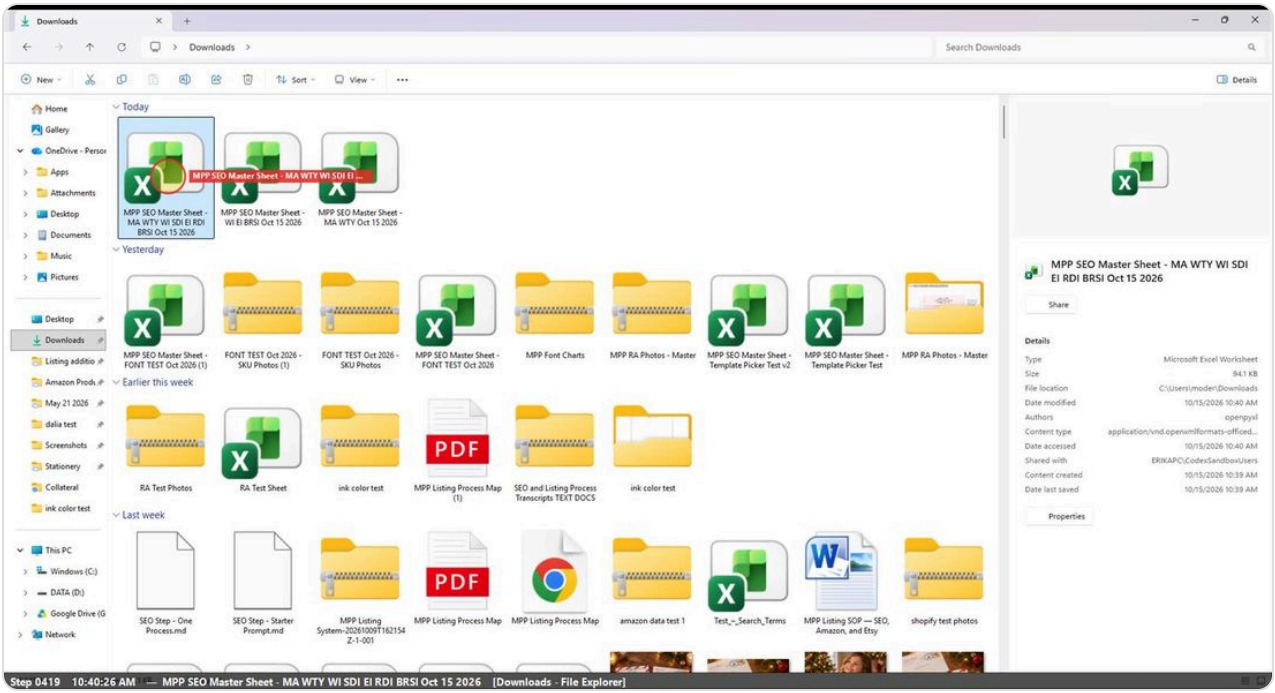

3.8 When Claude finishes, it shows a note and a card named **MPP SEO Master Sheet**. Click the card to open a preview. Click **Download as XLSX** at the top right of the preview.

Click **Download as XLSX**.

If Claude made a merged sheet, use the **merged** sheet. Claude's note says things like "All 154 SKUs are now in one merged sheet."

3.9 The file goes to your **Downloads** folder. Open File Explorer. On the left click **Downloads**. Find the new file. Its name starts with `MPP SEO Master Sheet` and has an Excel icon (a green X).

The newest file is at the top, under **Today**.

3.10 Copy the file into your batch folder. Click the file once, press `Ctrl + C`, open the batch folder, and press `Ctrl + V`.

Check yourself

- Claude's note says the rule checker found **0 errors**.
- Claude says every photo matched a row.
- The sheet file is in your batch folder.

STOP AND ASK DALIA IF

- Claude asks a question you do not know how to answer, or stops early.
- Claude says something is missing or wrong with the photos.

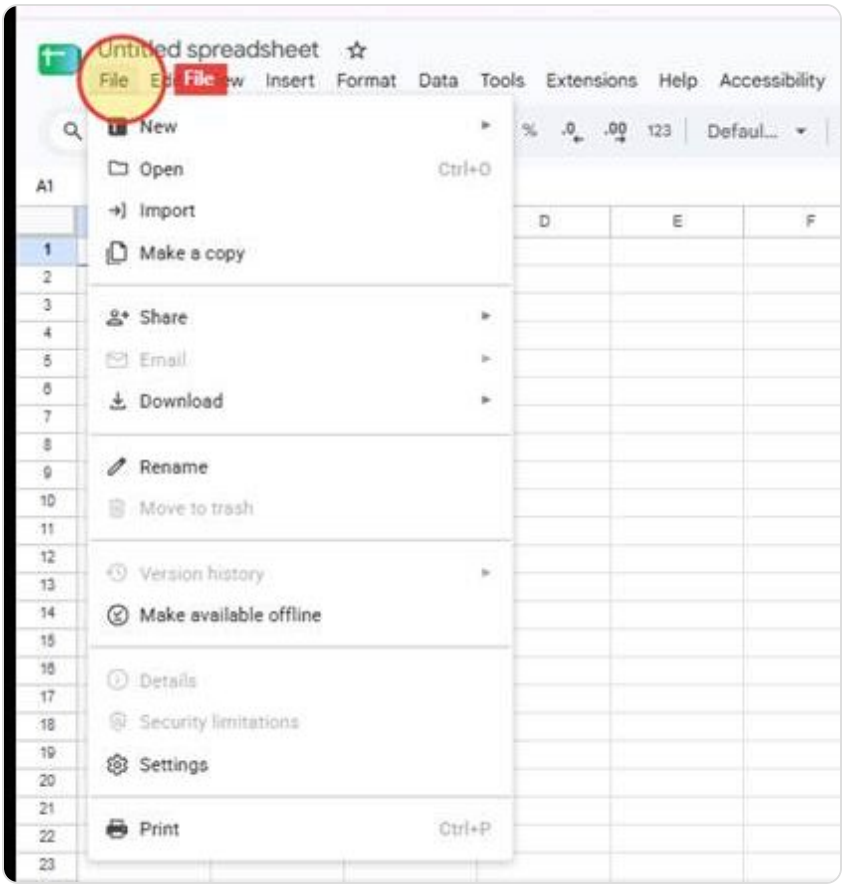

4 Check Claude's sheet

You are the editor. Claude can make mistakes. Read every row.

Open the sheet in Google Sheets

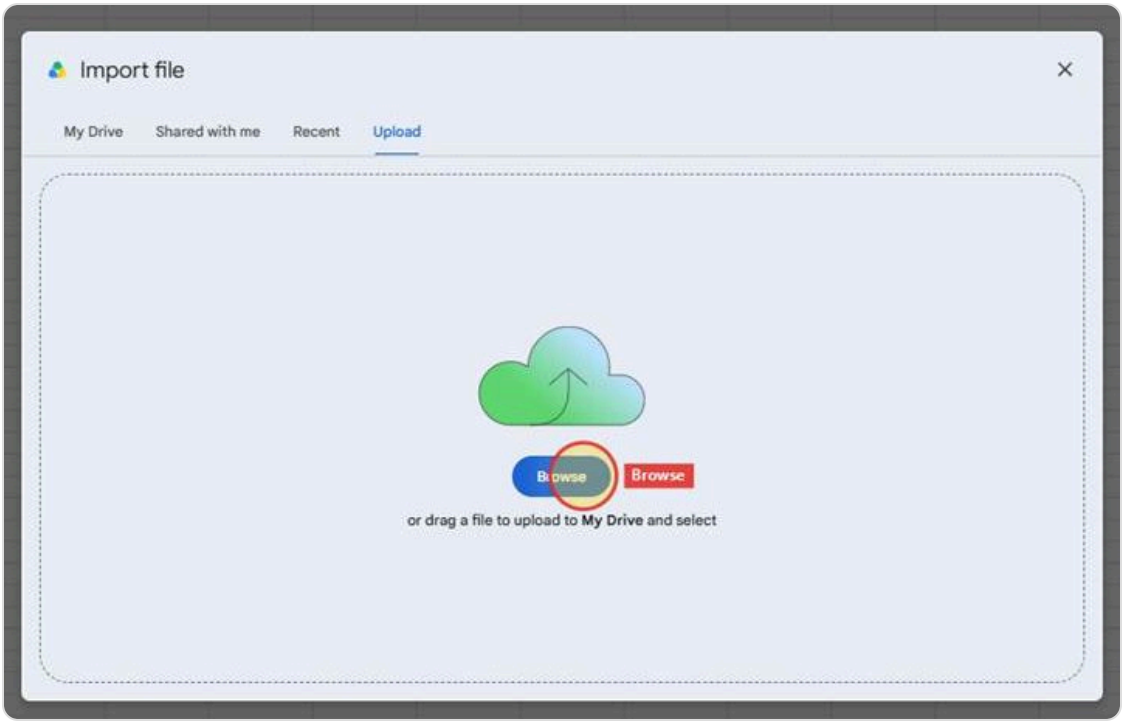

4.1 In Chrome, open a new blank Google Sheet. It is called **Untitled spreadsheet**.

4.2 Click **File** at the top left. Click **Import**.

The File menu. Click **Import**.

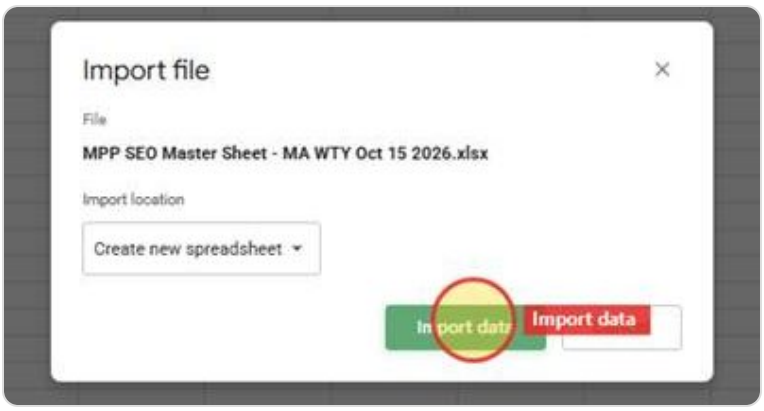

4.3 A window called **Import file** opens. Click the **Upload** tab. Click the blue **Browse** button.

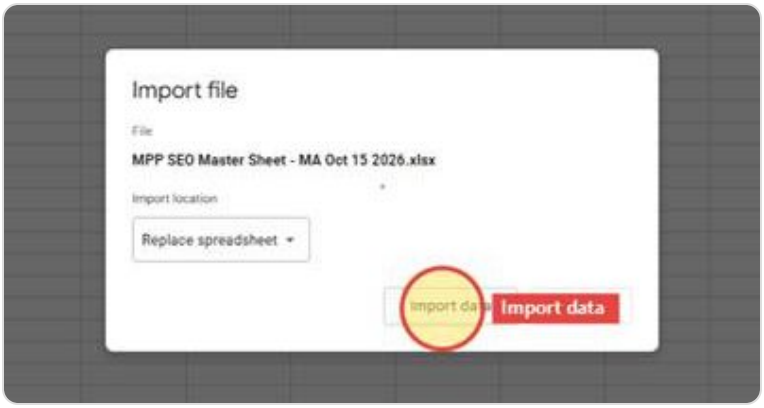

Click **Browse**.

4.4 A file window opens. On the left click **Downloads**. Click your `MPP SEO Master Sheet` file. Click **Open**.

4.5 Look at **Import location**. Leave it on **Create new spreadsheet**. (If you are replacing a sheet you already have open, it says **Replace spreadsheet**. That is fine too.) Click **Import data**.

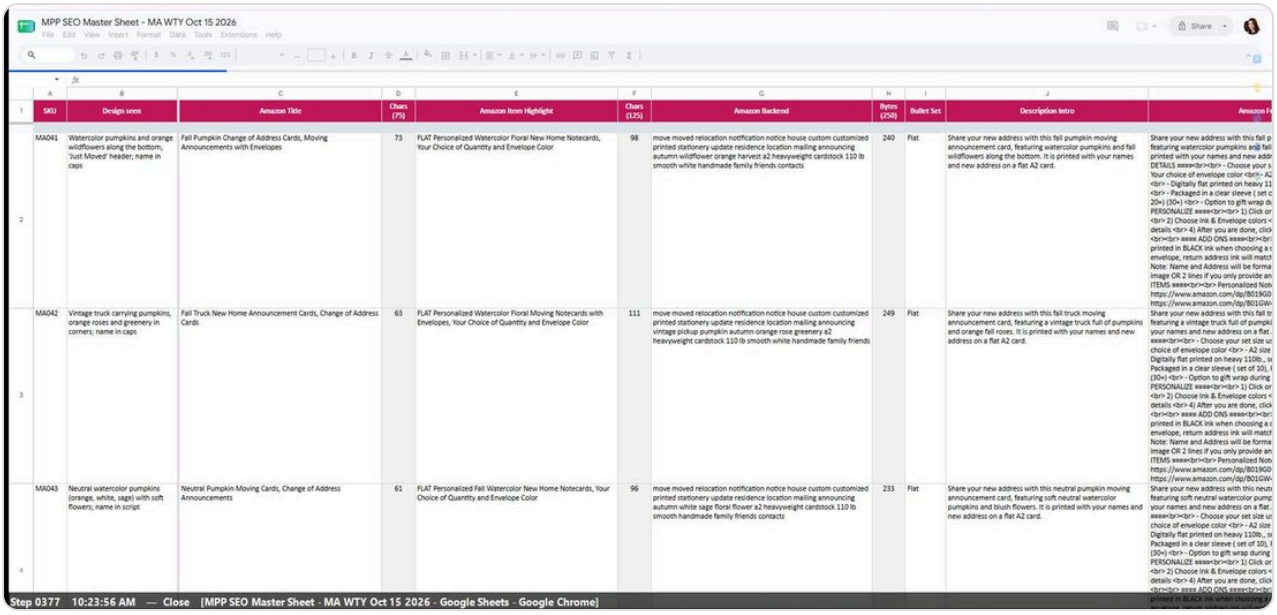

Create new spreadsheet, then **Import data**.

If it says **Replace spreadsheet**, you can click **Import data** too.

4.6 Click **Open now**. Your sheet opens. Its name starts with `MPP SEO Master Sheet`.

The imported sheet. Each row is one SKU.

Read and mark every row

4.7 Each row is one SKU. On every row, read these columns: **Design seen**, **Shopify Page Title**, **Meta Description**, **Shopify Description**, **Shopify Tags**, and **Keywords used**.

4.8 Ask yourself these questions on every row:

- Does the title sound like a real title? A title that is only a pile of design words is wrong.
- Do the words match the card in the picture? A word for something that is not on the card is wrong.
- Is the description easy to read?

Real notes Erika wrote on this day: "shopify title doesn't sound like a complete title" and "eucalyptus should not be included in the title or item highlight for this design."

4.9 Scroll to the right to the yellow column **Approved?**. Click the cell on a row. A small list drops down. Click one:

- **Yes**: the row is good.
- **Fix**: the row needs a change. Click the **Notes** cell next to it. Type what to change and why.
- **No**: do not list this one.

The **Approved?** list. Erika picked **Yes**.

4.10 If any cell is yellow or orange, fill it in.

4.11 Save the sheet as a file. Click **File**, then **Download**, then **Microsoft Excel (.xlsx)**. Copy the file from Downloads into your batch folder.

If any row says Fix

4.12 Go back to the **same Claude chat** from Step 3. Attach the sheet you just saved. Tell Claude to fix the rows marked Fix. You can also type a rule. Example from the recording: `if hand drawn is search then keep it - do not get rid of it`

4.13 If you attach a newer sheet, click the **x** or **Remove** on the old file in the message box first, so Claude only sees the new one.

4.14 Claude may ask you a question. Answer it. Wait for Claude. Then click **Download as XLSX** again.

4.15 Import the new file and check the rows again (4.1 to 4.11). Do this again and again until **every row you want listed says Yes**.

IMPORTANT

The Lister only reads rows that say **Yes**. A row that is blank, Fix, or No will not be listed.

Check yourself

- Every row you want has **Yes**.
- You saved the final file as .xlsx in the batch folder.

5 Make the Shopify drafts

The MPP Shopify Lister builds each listing as a draft.

GOOD TO KNOW

The screen recording stopped before Erika clicked **Make 1 draft** and **Make all drafts**. Steps 5.9 to 5.12 come from the written steps in Claude's chat **SEO and Shopify listing process**. They have no pictures from the recording.

Open the Lister

5.1 In Chrome, click the Shopify tab named **Modern Pink Paper · Products**. If you do not have it, open a new tab and go to `admin.shopify.com/store/modern-pink-paper1/products`.

5.2 Look at the **bottom right corner** of the page. Click the blue **MPP Shopify Lister** button.

The Lister button.

5.3 A panel opens on the right. Look at its title. It must say `MPP Shopify Lister v1.8.1`. The panel has numbered buttons 1 to 5 and a **Log** box at the bottom.

The Lister panel. Erika clicked **Load MPP SEO Master Sheet (.xlsx)**.

5.4 **One-time check.** Click the small arrow next to **Settings**. The **Source SKUs** box must have a line like `WTY=WTY030`. If it only says `FI=FI043`, paste the full list from the file `P-070/Shopify Source SKUs.md`. Then click **Save settings**.

Click the arrow next to **Settings**.

Load your files

5.5 Click button **1. Load MPP SEO Master Sheet (.xlsx)**. A file window opens. Pick your final `.xlsx` file from your batch folder. Click **Open**.

5.6 The panel now tells you how many rows are approved. Example: *"22 approved of 22 rows."*

If the first number is smaller than the second, some rows are not marked **Yes**. Go back to Step 4.

5.7 Click button **2. Load photo zip**. Pick your **SKU Photos zip** from the batch folder. Click **Open**. The panel says how many photos it found. Example: *"22 photos."*

5.8 Look at the two lines under button 2. **RA photos** and **font charts** must each end with *(saved)*. If one does not, click its button and pick the file. The files are called `MPP RA Photos - Master.zip` and `MPP Font Charts - Master.zip`. Erika keeps them in `Collateral › Listing additional Photos`. You only do this once.

Check, then build

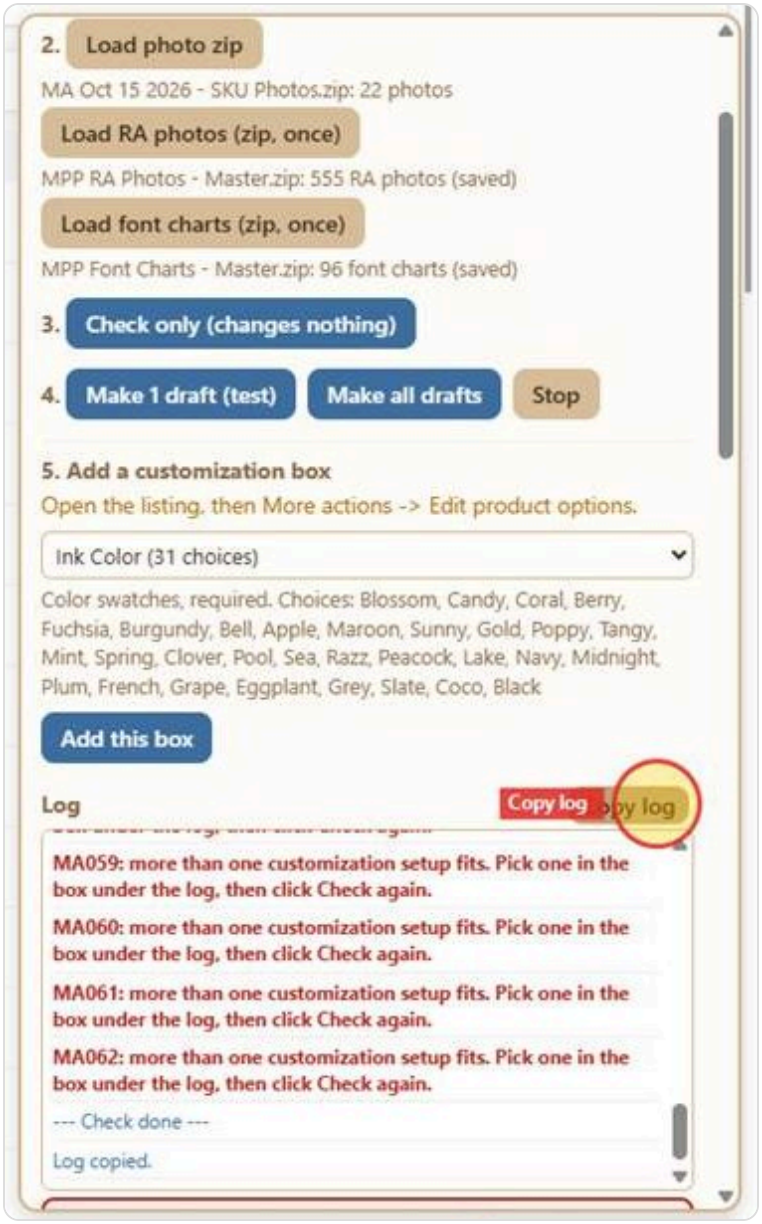

5.9 Click button **3. Check only (changes nothing)**. This does **not** change Shopify. It only fills the **Log** box. Read **every line**. Scroll the Log box if you need to.

- **Green** means ready.
- **Orange** means read the note.
- **Red** means **stop** and fix it.

The log after **Check only**. The last line says --- *Check done* ---.

Next, the Lister may print red lines like *"more than one customization setup fits. Pick one in the box under the log, then click Check again."* That is normal for MA cards. See 5.10. Click **Copy log** if Dalia wants to see the log.

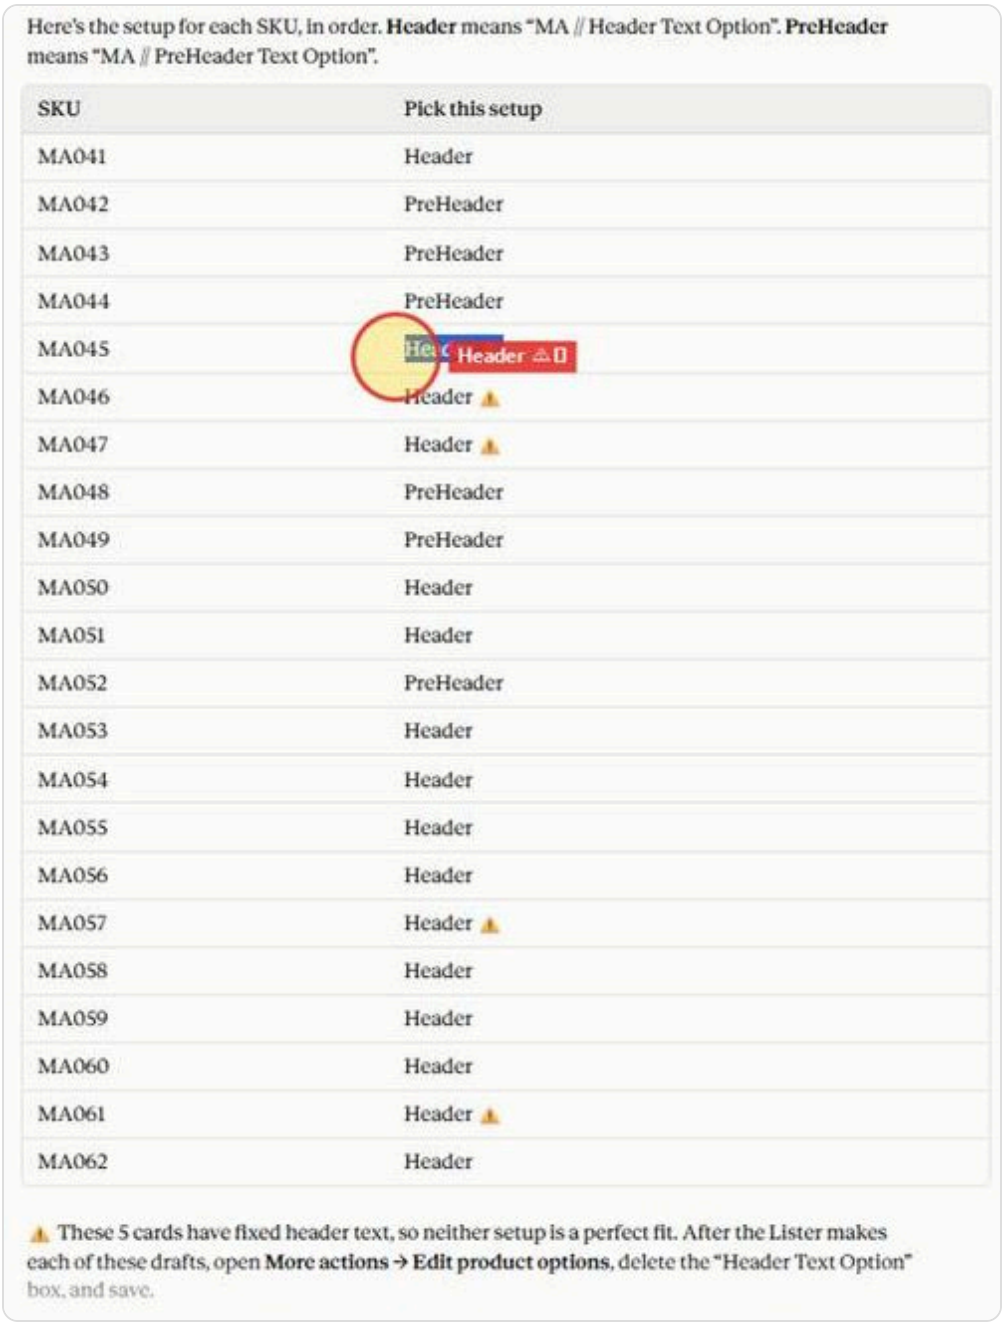

Red lines. Erika clicked **Copy log** (the circle).

5.10 **MA cards have two setups.** A pick box shows under the log for every MA SKU. Look at the top line printed on the card, then pick:

- The card says *Just Moved*, *We've Moved*, or *I've Moved*: pick **MA // Header Text Option**.
- The card says *I have a new home* or *We have a new home*: pick **MA // PreHeader Text Option**.
- The card's top line is fixed words like *Merry Christmas from our new home*: pick either one. After the draft is made, open the draft, click **More actions**, then **Edit product options**, delete the header box, and save.

After you pick, click **3. Check only** again. Claude gives you a table that says which setup each SKU needs. Use it.

Here's the setup for each SKU, in order. **Header** means "MA // Header Text Option". **PreHeader** means "MA // PreHeader Text Option".

SKU	Pick this setup
MA041	Header
MA042	PreHeader
MA043	PreHeader
MA044	PreHeader
MA045	Header ⚠ 0
MA046	Header ⚠
MA047	Header ⚠
MA048	PreHeader
MA049	PreHeader
MA050	Header
MA051	Header
MA052	PreHeader
MA053	Header
MA054	Header
MA055	Header
MA056	Header
MA057	Header ⚠
MA058	Header
MA059	Header
MA060	Header
MA061	Header ⚠
MA062	Header

⚠ These 5 cards have fixed header text, so neither setup is a perfect fit. After the Lister makes each of these drafts, open **More actions → Edit product options**, delete the "Header Text Option" box, and save.

Claude's table for this batch. The warning mark means the card has fixed header text.

WTY cards need the **Source SKUs** box from 5.4. The Lister copies the listing from WTY030.

5.11 Click button **4. Make 1 draft (test)**. Wait. In the log, click **open** to see the draft. Check the title, description, photos, and tags. The photo order is: main photo first, then the return address photo, then a font chart if the card has one. Invitations have no tags. Click **Preview** and check that the customization boxes fit the design.

5.12 If the test draft is right, click **Make all drafts**. If a SKU is already on Shopify, the Lister skips it by itself. Click **Stop** only if you need to stop it.

Check yourself

- The log has no red lines.
- You looked at the test draft before you made all of them.

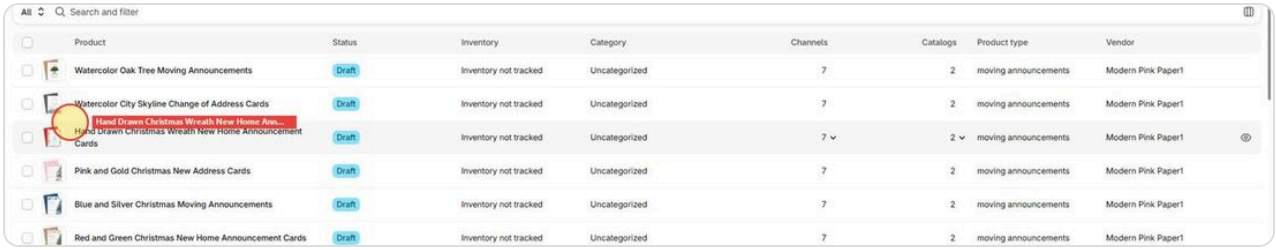

STOP AND ASK DALIA IF

- Check only shows a red line you cannot fix.
- A draft is missing a photo or has the wrong customization boxes.

6 Check the drafts and make them Active

This is the step that lets customers see the listings.

6.1 On the Shopify **Products** page, press `F5` to reload. Your new listings show **Draft** in the Status column.

New listings show as **Draft**.

6.2 Click a draft's name to open it. Check the title, the photos, and the options. Fix anything wrong. Then go back to the list. Do this for **every** draft in the batch.

6.3 On the Products list, click the check box next to each draft in your batch. The top of the list says how many are selected. Example: *22 selected*. Click **Set as active**.

Select the drafts, then click **Set as active**.

6.4 A box asks *"Set 22 products as active?"* Make sure the number is right. Click **Set as active**.

The last click. The listings are now live.

6.5 Press `F5` to reload. The Status column now says **Active**.

6.6 NO PICTURE

Look at the live page. Open a listing and click **View on Online Store**. A new tab opens with the page customers see. Check the title, photos, and options there. Erika did this for each new listing right after she set them Active. Close the tab when you are done.

CAREFUL

Do not click **Set as active** until you have looked at every draft. Once a listing is active, customers can buy it.

Check yourself

- The Status column says **Active** for every listing in the batch.
- The live page opens and looks right.

7 Fix the special options

Header words, ink color, and initials are added with the options app.

NO PICTURES FOR THIS STEP

This step comes from Erika's activity log after the recording ended, and from Claude's written steps. It has no screenshots. Do it once with Dalia watching.

7.1 Open the listing in Shopify. Click **More actions**, then **Edit product options**. The app **VO Product Options** opens. (Its address starts with `admin.shopify.com/store/modern-pink-paper1/apps/variant-options-product-options/`.)

7.2 **Header words.** Some cards have a fixed top line, like *We've planted new roots*. Open the same card on Amazon and click **Customize now**. Copy the header choices you see, for example `FROM OUR NEW HOME (as shown)` and `FROM MY NEW HOME`. In the options app, change the header choices to match. Click **Done**, then **Save**.

7.3 **Ink color and initials** (from Claude's list for this batch). Open the draft. Click **More actions**, then **Edit product options**. In the Lister panel, find **5. Add a customization box**. Pick the box from the list. Click **Add this box**. Look it over. Click **Save**.

- WTY053, WTY055, WTY058: add **Ink Color for Text**.
- WTY051: add **Ink Color for Border and Text**.
- WTY044, WTY053, WTY058: add **2 Letters for Monogram**.

The log warns you about these when you click **Check only**. The list changes with each batch.

7.4 Reload the live page. Check that the new options show.

8 Write it down and tell Dalia

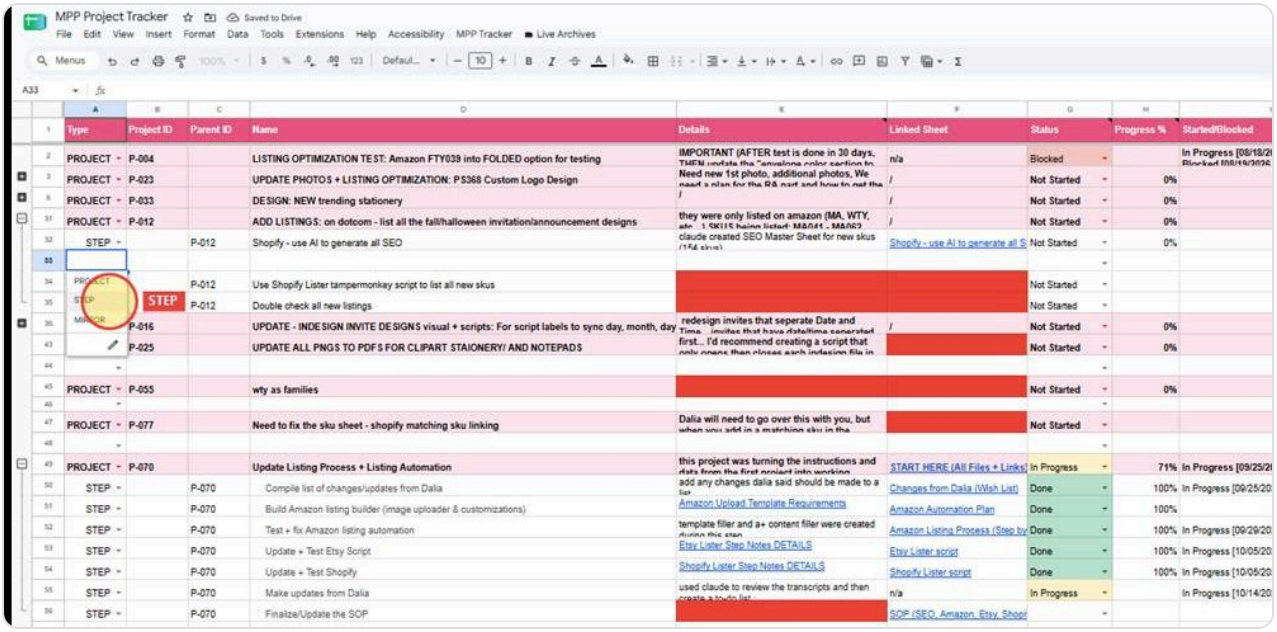

Update the Project Tracker, then send a Teams message.

Update the Project Tracker

8.1 In Chrome, click the tab **MPP Project Tracker**.

8.2 Find the project for this work. In the recording it was **P-012**, *ADD LISTINGS: on dotcom*. The steps for a project sit right under it.

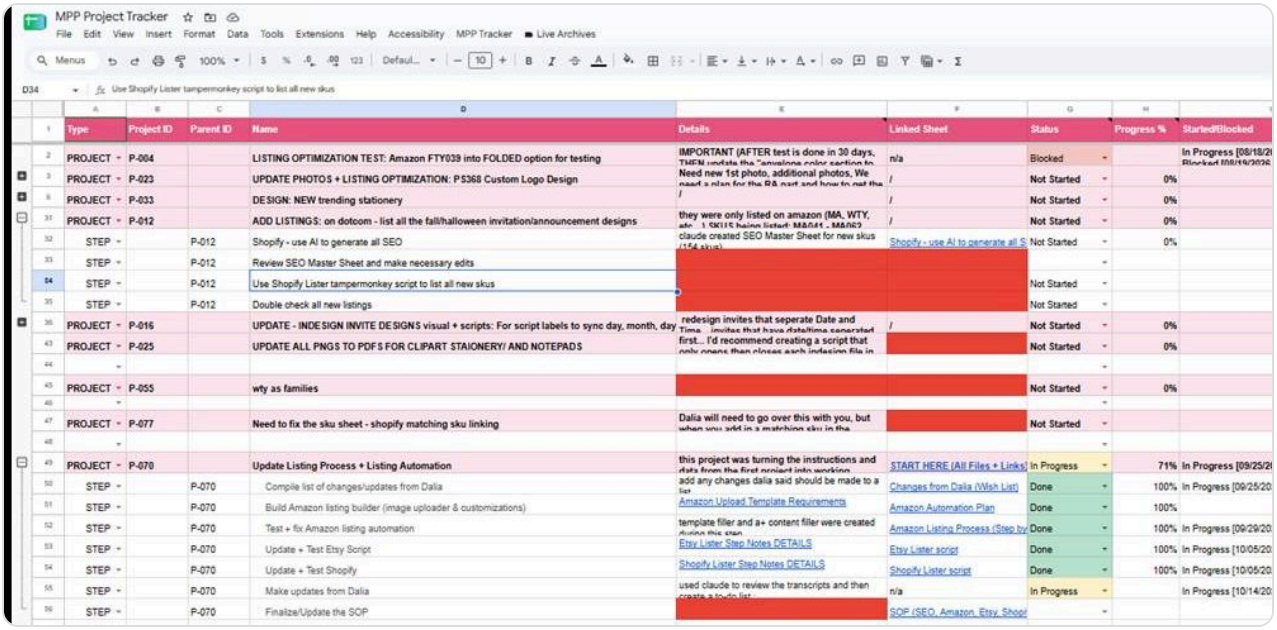

8.3 Right-click a row. Click **Insert 1 row below**. In the **Type** column, open the small list and pick **STEP**. Type the project number (`P-012`) in **Parent ID**.

Pick **STEP** in the Type list.

8.4 In **Name**, write the step you did. Erika's steps for this project were:

- Shopify: use AI to generate all SEO
- Review SEO Master Sheet and make necessary edits
- Use Shopify Lister tampermonkey script to list all new SKUs
- Double check all new listings

Four STEP rows under **P-012**.

8.5 Set the **Status** for each step, for example Done or In Progress.

Tell Dalia

8.6 Open **Microsoft Teams** from the taskbar. Open the chat with Dalia.

8.7 Write a short note. Say which SKUs went live and tell her about anything odd. Press `Ctrl + Enter` to send.

That is the whole job. Amazon and Etsy have their own Listers. They are not part of this guide.

If something goes wrong

WHAT YOU SEE	WHAT TO DO
A red line in the Lister log	Stop. Read the line. Fix the problem. Click **Check only** again.

WHAT YOU SEE	WHAT TO DO
"More than one customization setup fits"	Pick one setup in the box under the log. Click **Check only** again. See step 5.10.
The Lister says fewer rows approved than rows loaded	Some rows are not marked **Yes**. Go back to Step 4.
RA photos or font charts do not end with (saved)	Click that button and load the Master zip. You only do this once.
Claude's sheet has yellow or orange cells	Fill them in yourself (step 4.10).
The photo count in the zip is wrong	Go back to Step 2. Copy the missing photos into the SKU Photos folder. Make the zip again.
The Shopify tab is slow or Chrome says "High memory usage"	Press `F5` to reload the tab. Erika reloaded it often during the recording.
Claude wants to split the batch	Pick the **Recommended** choice. Use the merged sheet at the end.
You cannot find the Lister button	Tell Dalia. The Lister is a Tampermonkey script in Chrome and may be turned off.

Ask Dalia before Erika leaves

The recording did not show everything. These are the gaps. Fill them in and this guide is complete.

- **How to read a font name in InDesign.** The recording shows the file opening and the fonts being typed. It does not show how each font was read (step 1.8).
- **How to choose the batch.** Who decides which SKUs go in a batch, and how many.
- **How Erika attached the zip in Claude** (step 3.3), and how she made the zip (step 2.14).
- **The Lister's draft buttons.** The recording ended before Make 1 draft and Make all drafts. Steps 5.11 and 5.12 are from Claude's written steps.
- **The options app.** Step 7 is from the activity log only. Walk through it once.

- **The Settings box.** Where the file `P-070/Shopify Source SKUs.md` lives.
- **The Teams message.** What to write, and any other person to tell.
- **Logins.** Google, Shopify, Claude, Teams, and Tampermonkey.
- **The rules inside Claude.** The SEO rules live in the Claude project **Amazon, Etsy, & Shopify Listing**, in a file called `SEO Step - One Process.md`. This guide does not repeat them.

Built from the MT Log SOP recording "Listing Process for Shopify/Dotcom" (session 09155259) on Erika's PC, plus the written steps visible in Claude on that screen, plus Erika's activity log from 2:00 PM to 3:00 PM that day. Screenshots were cropped from the recording. The red circle in each picture is where Erika clicked.
